AMCAT ( Aspiring Minds) previous questions with solutions-4  
**2015 & 2016 Batch Freshers Registration Link**

**JOIN MY FACEBOOK GROUP FOR UPDATES**

**Ques. PUBLICATION is related to LIBEL in the same way as SPEECH is related to**

**Op 1: Liability**

**Op 2: Slander**

**Op 3: Attack**

**Op 4: Information**

**Op 5:**

Correct Op : 2

slander false malicious statement spoken or if it is pulished then libel

**Ques. Earth : Grass :: ?**

**Op 1: Sky: Star**

**Op 2: Tree: Leaf**

**Op 3: Scalp: Hair**

**Op 4: Pond : Fish**

**Op 5:**

Correct Op : 3

grass grows on earth...hair grows on scalp

**Ques. Vehicle : Cart :: ?**

**Op 1: Country : State**

**Op 2: Ocean : Sea**

**Op 3: Man : Child**

**Op 4: Music : Jazz**

**Op 5:**

Correct Op : 4

cart is a type of vehicle, jazz is a type of music.

**Ques. Prodigious : Meagre**

**Op 1: Sleep : Relaxation**

**Op 2: Handsome : Beautiful**

**Op 3: Regard: Honour**

**Op 4: Exhilarated : Depressed**

**Op 5:**

Correct Op : 4

prodigious-remarkably or impressively great in extent, size, or degree

Meagre-lacking in quantity or quality

\*Both are opposite of each other\*

Exhilarated-make (someone) feel very happy, animated, or elated.

Depressed- state of unhappiness or despondency.

**Ques. Mundane : Spiritual :: ?**

**Op 1: Common : Ghostly**

**Op 2: Worldly : Unworldly**

**Op 3: Secular : Clerical**

**Op 4: Novel: Routine**

**Op 5:**

Correct Op : 2

The average weight of 8 persons increases by 2.5kg when a new person comes in a place of one of them weighing 45kg.what is the weight of the new person??

total weight increased=(2.5kg\*8)=20kg

weight of the new person=(45+20)=65kg

ans:w=65kg

**Ques. Statements**

**(a) No vest is shirt.**

**(b) All shirts are jackets.**

**Conclusions**

**I. All vests are jackets.**

**II. No vest is a jacket.**

**III. Some jackets are shirts.**

**IV. All jackets are shirts.**

only III follow

**Ques. Electrical Engineers : Grid :: Cosmologists : ?**

**Op 1: Group**

**Op 2: Faculty**

**Op 3: Galaxy**

**Op 4: Syndicate**

**Op 5:**

Correct Op : 3

cosmos means celestial object found in galaxy

**Ques. Statements:**

**Some metals are minerals.**

**All minerals are solids.**

**Conclusions:**

**I. All solids are made up of metals and minerals.**

**II. Some minerals are metals.**

**Op 1: Only conclusion I follows.**

**Op 2: Only conclusion II follows.**

**Op 3: Either I or II follows.**

**Op 4: Neither I nor II follows.**

**Op 5: Both I and II follow.**

Correct Op : 2

**Ques. Statements:**

**Some pens are books. All schools are books.**

**Some colleges are schools.**

**Conclusions:**

**I. Some colleges are pens.**

**II. Some pens are schools.**

**III. Some colleges are books.**

**Op 1: All follows**

**Op 2: Only I and II follows**

**Op 3: Only II and III follow**

**Op 4: Only I and III follows**

**Op 5: None of these**

Correct Op : 5

**Ques. Statements:**

**Some buses are houses. All houses are taxis.**

**All rickshaws are taxis.**

**Conclusions:**

**I. Some rickshaws are houses.**

**II. Some taxis are houses.**

**III. Some taxis are buses.**

**Op 1: None follows**

**Op 2: Only I follows**

**Op 3: Only II follows**

**Op 4: Only II and III follow**

**Op 5: All follow**

Correct Op : 4

**Ques. Statements:**

**All oceans are rivers. Some springs are rivers.**

**All wells are springs.**

**Conclusions:**

**I. Some springs are oceans.**

**II. Some wells are rivers.**

**III. Some rivers are oceans.**

**IV. No well is river.**

**Op 1: Only either II or IV and III follow.**

Op 2: Only either II or IV and I follow.

Op 3: Only either I or III and IV follow.

Op 4: None follows

Op 5: All follow

Correct Op : 1

Ques. Statements:

Some buses are rivers.

All rivers are mountains.

Some roads are mountains.

Conclusions:

I. Some mountains are buses.

II. Some roads are buses.

III. Some roads are rivers.

IV. Some mountains are roads.

**2015 & 2016 Batch Freshers Registration Link**

Op 1: All follow

Op 2: Only II, III and IV follow

Op 3: Only III and IV follows

Op 4: Only I and IV follows

Op 5: None of these

Correct Op : 4

Ques. Statements

(a) All shares are debentures.

(b) No debenture is an equity.

Conclusions

I. No equity is a share.

II. Some debentures are shares.

III. No share is an equity.

Op 1: Only I follows

Op 2: Only II follows

Op 3: All follow

Op 4: Only III follows.

Op 5:

Correct Op : 3

Ques. Statements

Some ship are boats. All boats are submarines. Some submarines are yatches.

Conclusions

I. Some yatches are boats.

II. Some submarines are boats.

III. Some submarines are ships.

IV. Some yatches are ships.

Op 1: All follow

Op 2: Only II and III follows

Op 3: Only III follows

Op 4: Only either III or IV follows.

Op 5: None of these

Correct Op : 2

Ques. 5: 124 :: 7 :?

Op 1: 342

Op 2: 343

Op 3: 248

Op 4: 125

Op 5:

Correct Op : 1

$5^3 = 125 - 1 = 124$

$7^3 = 343 - 1 = 342$

Ques. Statements

P: Some bags are hot.

Q: All hots are cakes.

Conclusions

I. All cakes are bags.

II. Some bags are cakes.

Op 1: Only conclusion I follows.

Op 2: Only conclusion II follows.

Op 3: Neither I nor II follows

Op 4: Both I and II follow.

Op 5:

Correct Op : 2

Ques. Statements

P: All doctors are surgeons.

Q: Some chemists are doctors

Conclusions

I. Some chemists are surgeons.

II. All surgeons are chemists.

Op 1: only conclusion I follows.

Op 2: only conclusion II follows.

Op 3: neither I nor II follows

Op 4: both I and II follow.

**Op 5:**

Correct Op : 1

**If  $\log x (0.1) = -1/3$ , then the value of x is:**

**Option 1 : 10 Option 2 : 100 Option 3 : 1000 Option 4 : 1/1000**

$\log x(0.1) = -1/3$

$x^{(-1/3)} = 0.1$

$x = (0.1)^{(-3)}$

$x = 1/(0.1^3)$

$x = 1/0.001$

$x = 1000$

**X and Y are two independent events. The probability that X and Y occur is 1/12, and the probability that neither occur is 1/2, the probability of occurrence of X can be:**

**Option 1 : 1/3 Option 2 : 1/5 Option 3 : 1/2 Option 4 : 1/10**

$P(X)P(Y) = 1/12$

And,  $(1-P(X))(1-P(Y)) = 1/2$

Solving both, we get,  $P(X) = 1/3$

**An unbiased coin is tossed n times. If the probability of getting 4 tails equals the probability of getting 7 tails, then the probability of getting two tails is:**

**Option 1 : 55/2048 Option 2 : 3/4096 Option 3 : 1/1024 Option 4 : None of these**

**Sudhanshu and Pankaj stand in a circle with 10 other persons. If the arrangement of the person is at random, then the probability that there are exactly 3 persons between Sudhanshu and Pankaj is?**

**Option 1 : 9/11 Option 2 : 2/11 Option 3 : 1/11 Option 4 : None of these**

First Fix position of Sudhanshu and Pankaj with 3

guys between them.

Select 3 guys  $\rightarrow 10C3$

Arrange them  $\rightarrow 3!$

Arrange pos. of both  $\rightarrow 2!$

Treat all 5 as 1 and arrange all  $\rightarrow 7!$

ANS  $\rightarrow (10C3 * 3! * 2! * 7!)/11! = 2/11$

**Three numbers are chosen from 1 to 30 randomly. The probability that they are not consecutive is:**

**Option 1 : 1/145 Option 2 : 144/145 Option 3 : 139/140 Option 4 : 1/140**

Ways of selecting 3 consecutive number from 1 to 30

is 28

Ways of selecting 3 number from 1 to 30 is  $30C3$

Probability that they are not consecutive is  $1 - (28/$

$(30C3)) = 1/145$

**2015 & 2016 Batch Freshers Registration Link**

**A bag is full of 20 bananas and no other fruit. Rajeev draws a fruit from the bag. What is the probability that he will draw a banana?**

**Option 1 : 1 Option 2 : 0 Option 3 : 1/2 Option 4 : None of these**

No other fruit present, than he will always draw a

banana, so Probability is 1

**An unbiased dice is rolled 5 times and the outcomes are 1, 2, 3, 4 and 5 respectively. If it is rolled again, what is the probability that the outcome is 6?**

**Option 1 : 1 Option 2 : 5/6 Option 3 : 1/6 Option 4 : None of these**

Probability of any number in dice roll is  $1/6$

**The probability of drawing an apple from a bag of fruits is 6/25. How many apples should Ravi draw, so that there is a chance he will draw 12 apples on average?**

**Option 1 : 25 Option 2 : 50 Option 3 : 12 Option 4 : None of these**

25 draws  $\rightarrow 6$  apples

50 draws  $\rightarrow 12$  apples

**What is the probability for a day to be Sunday?**

**Option 1 : 1/7 Option 2 : 1/5 Option 3 : 52/365 Option 4 : None of these**

$1/7$

**Rani has a bag with three blue and three yellow coins. She takes out a coin, sees its colour and puts it back in the bag. She does this thrice. What is the probability that she saw all blue coins.**

**Option 1 : 1/8 Option 2 : 1/2 Option 3 : 1/3 Option 4 : None of these**

Probability of coin being blue  $\rightarrow 1/2$

Ans:-  $(1/2)(1/2)(1/2) = 1/8$

**Shikhar has a bag with 2 balls, each of which can be black or white with equal probability. Now, he draws out a ball and it turns out to be black. After this event, what is the probability that both balls are black?**

**Option 1 : 1/2 Option 2 : 1/4 Option 3 : 1 Option 4 : None of these**

one ball is black.

Probability of other being black is  $1/2$

**A coin is tossed thrice. What is the probability that the first toss of coin lands head, second tail and third lands tail as well?**

**Option 1 : 1/16 Option 2 : 3/8 Option 3 : 1/8 Option 4 : None of these**

$(1/2)(1/2)(1/2) = 1/8$

**The probability of occurrence of event A is 0.3 and that of event B is 0.4. The events are independent. What is the probability of occurrence of both A and B?**

**Option 1 : 0.7 Option 2 : 0.1 Option 3 : 0.12 Option 4 : Cannot be determined**

For independent events

$P(A \cup B) = P(A) * P(B) = 0.12$

**The probability of occurrence of event A is 0.1 and that of event B is 0.2. The events are mutually exclusive. What is the probability of occurrence of both A and B?**

**Option 1 : 0.1 Option 2 : 0 Option 3 : 1 Option 4 : Cannot be determined**

For mutually exclusive  $P(A \text{ and } B) = 0$

The probability of occurrence of event X is 0.8 and that of event Y is 0.05. The events are mutually exclusive. What is the probability of occurrence of either X or Y?

Option 1 : 0.85 Option 2 : 0.75 Option 3 : 0 Option 4 : Cannot be determined

$P(A \text{ or } B) = P(A) + P(B) = 0.85$

10% of the voters did not cast their vote in an election between two candidates. 10% of the votes polled were found invalid. The successful candidate got 54% of the valid votes and won by a majority of 1620 votes. The number of voters enrolled on the vote

Option 1 : 25000 Option 2 : 33000 Option 3 : 35000 Option 4 : 40000

Let total voters be x

Total number of voters who cast their vote =  $0.9x$

Total number of valid vote =  $0.9x - 0.09x = 0.81x$

$(54-48)(\text{valid votes})/100 = 1620$

Therefore, Valid votes = 27,000

Hence,  $0.81x = 27000$

$x = 33000$

A, B, C started a business with their investments in the ratio 1:3:5. After 4 months, A invested the same amount as before and B as well as C withdrew half of their investments. The ratio of their profits at the end of the year is:

Option 1 : 4:3:5 Option 2 : 5:6:10 Option 3 : 6:5:10 Option 4 : 10:5:6

Tea worth Rs. 126 per kg and Rs. 135 per kg are mixed with a third variety in the ratio 1:1:2. If the mixture is worth Rs. 153 per kg, the price of the third variety per kg will be:

Option 1 : Rs. 169.50 Option 2 : Rs. 170 Option 3 : Rs. 175.50 Option 4 : Rs. 180

In 4 kg of mixture, 1 kg is Tea of each and 2 kg in other substance

Hence,  $126 + 135 + 2x = 4.153$

$x = 175.50$

A can contains a mixture of two liquids A and B in the ratio 7:5. When 9 litres of mixture are drawn off and the can is filled with B, the ratio of A and B becomes 7:9. How many litres of liquid A was contained by the can initially ?

Option 1 : 10 Option 2 : 20 Option 3 : 21 Option 4 : 25

Let total liquid = x

$a = 7x/12$

$b = 5x/12$

when 9 litre is drawn

$a = (7(x-9))/12$

$b = (5(x-9))/12$

Then 9 litre of b is added

hence,  $b = (5(x-9))/12 + 9$

Now  $a:b = 7:9$

Hence  $\rightarrow$

$((7(x-9))/12) / ((5(x-9))/12 + 9) = 7/9$

$x = 31$

Hence,  $a = 7.36/12 = 21$

A man bought a number of clips at 3 for a rupee and an equal number at 2 for a rupee. At what price per dozen should he sell them to make a profit of 20% ?

Option 1 : Rs 4 Option 2 : Rs 5 Option 3 : Rs 6 Option 4 : Rs 7

Price of x clips =  $x/3$

Again, Price of another x clips =  $x/2$

Hence Price of 2x clips =  $x/3 + x/2 = 5x/6$

Hence price of 1 clip =  $5/12$

Hence price of 12 clip = 5

20% profit =  $5 + 1 = 6$

Padam purchased 30 kg of rice at the rate of 17.50 per kg and another 30 kg rice at a certain rate. He mixed the two and sold the entire quantity at the rate of Rs. 18.60 per kg and made 20% overall profit. At what price per kg did he purchase the lot

Option 1 : Rs.12.50 Option 2 : Rs. 13.50 Option 3 : Rs. 14.50 Option 4 : Rs. 15.50

20% profit means  $1.2 \times \text{Cost-Price} = 18.60 \times 60(\text{kg})$

$1.2(17.5 \times 30 + x \times 30) = 18.60 \times 60$

$x = 14.5$

The manufacturer of a certain item can sell all he can produce at the selling price of Rs. 60 each. It costs him Rs. 40 in materials and labour to produce each item and he has overhead expenses of Rs. 3000 per week in order to operate the plant. The number

Option 1 : 200 Option 2 : 250 Option 3 : 300 Option 4 : 400

anybody wants to come with me ?

a does anybody want to come with me ?

b is anybody want to come with me ?

c anybody want to come with me ?

d anybody wants to come with me ?

a). because it is in present indefinite affirmative so its correct interrogative will only option a)

out of 26 13 and 34 which two numbers are co prime

co primes are numbers having HCF equal to 1.

here 13 and 34 are having HCF equal to 1, hence they are co primes.

A tv manufacturer has decided to increase the sale to beat the economic slow down it decides to reduce the price of tv sets of 25% as a result of which the sales increased by 20 % what is the effect on total revenue of company

a) Decrease by 20%

b) increase by 20%

c) increase by 10%

d) decrease by 10%

Let  $c.p = 100$  so, marked price = 75

Final price = 120% of 75 = 90

hence, decrease in price =  $100 - 90 = 10$

op(d). decrease by 10%.

**Bullcart A** cover a certain distance at the speed of 15 km/hr, another bullcart **B** covers the same distance at the speed of 16 km/hr. If Bull cart A takes 16 minutes longer than B to cover the same distance find the distance?

distance travelled by

A

$$d = 15 * (t + 16/60)$$

distance travelled by B

$$d = 16 * t$$

$$\text{so } t = d/16$$

now putting in A

$$d = 64$$

so ans is 64km

**Which one of the following is the lowest level format to which the computer converts a higher language program before execution?**

**Option 1 : English code**

**Option 2 : Machine Code**

**Option 3 : Assembly Language**

**Option 4 : System Language**

**Arrange in order:**

**centigram**

**megagram**

**microgram**

**milligram**

**kilogram**

micro, milli, centi, kilo, mega

$$\log x^2(81-24x) = 1$$

$$\log x^2(81-24x) = 1$$

$$\Rightarrow \log x^2(81-24x) = \log x^2(x^2)$$

$$\Rightarrow 81-24x = x^2$$

$$\Rightarrow x^2 + 24x - 81 = 0$$

$$\Rightarrow (x+27)(x-3) = 0$$

$$\Rightarrow x = -27, 3$$

$$\text{so, } x = -27, 3$$

**In the following question select the word which is OPPOSITE in the meaning of the given word.**

**Q1. INDISCREET**

**a. reliable**

**b. honest**

**c. prudent**

**d. stupid**

**Q2. SOLICITUDE**

**a. insouciance**

**b. ingenuity**

**c. propriety**

**d. austerity**

1. prudent

2. insouciance

**Statement:**

'Please do not wait for me, I may be late, start taking lunch as soon as the guests arrive.' - a message from a Director of a Company to his Office managers.

**Assumptions:**

**I. Keeping guests waiting is not desirable.**

**II. Lunch may not be ready in time.**

**Op 1: Only Assumption I is implicit.**

**Op 2: Only Assumption II is implicit.**

**Op 3: Either Assumption I or II is implicit.**

**Op 4: Neither Assumption I nor II is implicit.**

**Op 5: Both Assumptions I and II are implicit.**

Correct Op : 1

**2015 & 2016 Batch Freshers Registration Link**

**How many stack/s need for implementing a queue ?**

**a) 2**

**b) 3**

**c) 1**

**d) 5**

minimum 2 are required...

One for push and One for pop

Opposite meaning of ENDORSE

synonym for endorse = support

antonym = oppose

**CONFUSE**

**(1) puzzle (2) orthodox**

**(3) sink (4) gratitude**

puzzle is synonym of confuse

**What is the greatest positive power of 5 that divides 30! exactly?**

ans : 7

$$\text{step 1: } 30/5 = 6$$

$$\text{step 2: } 30/25 = 1$$

$$\text{step 3 : } 6+1 = 7$$

**if  $(7^4 + a) * 5^b = 1725$  then what is the value of  $ab$ ?**

$$1725 = 5 * 5 * 69$$

$$(7^4 + a) = 5 * 5 * 69 / 5^b$$

hence,  $b=2$

putting value of  $b$ , we get  $a=-2332$

$ab = -2332 \times 2 = -4664$

The value of  $21/2$  upto three places of decimal is

if an integer  $k$  is divisible by 2, 5 and 13, what is the next largest number that is divisible by all the three given numbers ?

a)  $2k$

b)  $k+13$

c)  $2k+13$

d)  $2k+65$

e)  $k+130$

Let  $k=130$  bec it is divisible by 2, 5 & 13

Nxt largest no will be 260 i.e  $(k+130)$  which is divided by  $k=130$

hence ans will be (e)  $k+130$

$\log(p+q)(p-q) = -1 \dots \log(p+q)\log(p^2-q^2) = ?$

option: a) 2 b) 1 c) -1 d) 0

$\log(p^2-q^2) = -1$

$\log p^2 / \log q^2 = -1$

$\log p / \log q = -1$

$\log(p-q) = -1$

Again  $\log(p+q)(p-q) = -1$

$\log(p+q) + \log(p-q) = -1$

$\log(p+q) - 1 = -1$

$\log(p+q) = 0$

So  $\log(p+q)\log(p^2-q^2) = 0$

Ans: d) 0

A train runs at a speed of 42 m/s and takes 35 seconds to pass a tunnel. After travelling some distance it takes 15 seconds to pass a pole. What is the length of the tunnel?

a) 162m

b) 630m

c) 840m

d) 240m

Total distance travel  $= 42 \times 35 = 1470$

Now length of the train  $= 42 \times 15 = 630$

So length of the tunnel  $= 1470 - 630 = 840m$

so option c is correct

The labour union decided to go on strike since the management was adamant and did not agree to their terms. The discussion came to ———

a) climax

b) obstacle

c) impetus

d) impasse

impasse-it means not in progress

Ques. Introducing Sarita, Meena, said, "She is the only daughter of my father's only daughter". How is Meena related to Sarita?

Op 1: Niece

Op 2: Cousin

Op 3: Aunt

Op 4: None of these

Op 5:

Correct Op : 4

op4 none of these as meena is sarita's mother.

A content manager is working on an excel sheet. She has 6 columns in the sheet A,B,C,D,E and F. She has to check that no two columns should have the same entry. She can check only 2 columns at a time. How many times will she have to repeat the comparing process to complete process for the whole file?

a) 7

b) 8

c) 15

d) 10

$6C2 = 15$  ans

Three successive discounts of 6%, 10%, 15% is equal to a single discount of

a 25%

b 28.90%

c 30%

d 31%

e 28.09%

28.09

as,

6 % of 100 = 6,  $100 - 6 = 94$

10% of 94 = 9.4,  $94 - 9.4 = 84.6$

15% of 84.6 = 12.69,  $84.6 - 12.69 = 71.91$

then

$100 - 71.91 = 28.09$

Altaf writes a piece of code where a set of three lines occur around 10 times in a different parts of your program. What programming concept can he use to shorten program code length?

Option

a) use for loops

b) use functions

c) use arrays

d) use classes

To shorten program code length, he must use functions...

If that 3 lines be placed inside a function once, v can just call that function whenever need... No need to write those 3 lines

again nd again...

(b) use functions

**How many comparisons are needed to sort an array of length 5 if a straight selection sort is used and array is already in the opposite order?**

**Option 1 : 1**

**Option 2 : 10**

**Option 3 : 50**

**Option 4 : 20**

option 2:10

1st iteration it will compare 4 number with the 5

2nd iteration it will compare 3 numbers with the 4

3rd iteration it will compare 2 number2 with the 3

4th iteration it will compare 1 number with the 2

so the total number of comparisons is  $4+3+2+1 = 10$

**a) A boat travels 300m up stream in 15 minutes**

**b)Its speed down stream is 8/5 times its speed upstream**

**Which of the options provide the correct realationship between speed of current and speed of**

**1)Speed of current=12/10 times of speed of boat**

**2)Speed of current=3/13 times of speed of boat**

**3)Speed of current=12/10 times of speed of boat**

**4)Speed of current=9/13 times of speed of boat**

2) Speed of current=3/13 times of speed of boat

If speed of the boat=x & Downstream speed=x+y

Upstream speed=x-y & Downstream speed=x+y

Given,  $x+y=(8/5)*(x-y)$

$13y=3x$ , so  $y=(3/13)*x$

**2015 & 2016 Batch Freshers Registration Link**

**what is the number that is to be added to 0.00272 to make it a perfect square?**

The correct answer is 0.00017

because after point has two zero that means it is a square no...if u see the 272 ,is not square no. so u have to make it is a perfect square...so the whole no will be a perfect square..after 272 the nearest square no 289 ..so  $0.002879-0.00272=0.00017$ ....u hv to

add this after that the no. will be a perfect square

**martha was supposed to multiply the number of cans sold with the price of one can to ascertain the amount earned by her, Instead of taking 41 as the number of cans , she wrote 14 by mistake . As a result the product went down by 135. What is the other multiplier**

**a)5**

**b)7**

**c)9**

**d)12**

a]  $41x=14x+135$

ie  $x=5$

**At a certain party the ratio of gents and ladies was 1 : 2. But when 2 gents and 2 ladies left the party, the ratio became 1 :**

**3. How many people were initially present in the party?**

4 gents 8 ladies

$G/L=1/2$   $G-2/L-2=1/3$

ON SOLVING  $G=4$   $L=8$

if  $x^4+1/x^4=47$

then  $x^3+1/x^3=?$

lets add 2 to both sides so,  $x^4+1/x^4+2=47+2$

$(x^2+1/x^2)^2=49$

$x^2+1/x^2=7$

then  $x^2+1/x^2+2=7+2$

$(x+1/x)^2=9$

$x+1/x=3$

$(x+1/x)^3=x^3+1/x^3+3(x+1/x)$

$x^3+1/x^3=3^3-3*3=18$

so ans is 18.

**if the product of two co-prime number is 783.then find the L.C.M of these numbers.**

**a 1**

**b 783**

**c lcm will be equal to hcf**

**d lcm cant be calculated**

ans(b)

product of 2 numbers = h.cf of 2 numbers \*l.c.m of 2 numbers

hcf of 2 co-prime number= 1

so lcm=783

**A man earns Rs. 24,000 pm. He spends 1/3rd of his income on personal expenditures. Half of the remaining income is invested in a scheme at 15% interest pa. After investing, half of what is left is invested in a scheme which gives 10% interest pa. The remaining lies in a bank, where it earns an interest of 4% pa. The effective rate of interest earned by the man on his investments at the end of the year is ?**

amount remaining=  $24000-24000/3=16000$

1.  $16000/2=8000$   $SI=PRT/100=8000*15*1/100=1200$

2.  $8000/2=4000$   $SI=4000*10*1/100=400$

3.  $4000$   $SI=4000*4*1/100=160$

adding total interest= $1200+400+160=1760$

$SI=PRT/100$   $1760=16000*R*1/100$

Solving this  $R=11\%$  Ans.....

**Geetika writes a piece of code, where a set of eight lines occur around 10 times in different parts of the program (Code A). She passes on the code to Deva. Deva puts the set of eight lines in a function definition and calls them at the 10 points in the program (Code B). Which code will run faster using an interpreter?**

**Option 1 : Code A**

**Option 2 : Code B**

**Option 3 : Code A and Code B will run with the same speed**

**Option 4 : None of these**

I think code A. this is a case of function vs macro.

in code A the space occupied in memory will be larger but the code will run faster and in B code space will be same, but the time taken to execute will be more.

**Diesel costs Rs.4 per lit and petrol costs 5.23 per litre. If the price of diesel rise by 10% a month and the price of petrol is unchanged. How many months will it take until a litre of Diesel costs more than a litre of petrol.**

Answer is 3 Months.

In the First Month the price of the diesel would be  $4 * 110/100 = 4.4$

In the Second Month the price of the diesel would be  $4.4 * 110/100 = 4.84$

In the Third Month the price of the diesel would be  $4.84 * 110/100 = 5.324$  which is higher than the price of the petrol!

**What does this function compute for positive n?**

```
function f(int n)
{
    if (n equals 1)
    { return 1 }
    else
    { return f(n-1)/f(n-1) + n }
}
```

**Option 1 :  $1 + n$**

**Option 2 :  $1 + 2 + 3 + \dots + n$**

**Option 3 :  $1 + n$ , if  $n > 1$ , 1 otherwise**

**Option 4 : None of the above**

option 3 : suppose  $n=2$  the it will return  $f(2-1)/f(2-1)+2$  i.e.  $f(1)/f(1)+2$  which implies  $1+2 \dots$

similarly in case of  $n > 1$  say 3 we get  $1+3 \dots$

so the ans is  $1+n$ , if  $n > 1$ , otherwise 1

**what is the least amount that a person can have, such that when he distributes it into groups of rs 16 or rs 18 or rs 20 or rs 25, he is always left with rs 4?**

a) rs 1796

b) rs 1804

g) rs 2596

d) 3604

ans is d) 3604

the amount is 4 greater than the lcm of 20 25 16 and 18

so the lcm is 3600.

so the amount is 3604

**2015 & 2016 Batch Freshers Registration Link**

**the interior decorator was asked to cover the rectangular walls of an office with identical rectangular wall papers of exactly the same size. if a wall is 5.2m high and 5.0m wide, what is the largest size of the wall paper which can be used for this purpose. 1) 100cm 2) 50cm 3) 25cm 4) 20cm**

for largest size means largest common

HCF of 5.2, 5.0 = 0.2m = 20cm

```
function g(int n)
{
    if (n > 0) return 1;
    else return -1;
}
function f(int a, int b)
{
    if (a > b) return g(b-a);
    if (a < b) return g(a-b);
    return 0;
}
```

**If f(a,b) is called, what is returned?**

**Option 1 : Always -1**

**Option 2 : 1 if  $a > b$ , -1 if  $a < b$ , 0 otherwise**

**Option 3 : -1 if  $a > b$ , 1 if  $a < b$ , 0 otherwise**

**Option 4 : 0 if  $a$  equals  $b$ , -1 otherwise**

option 4: 0 if  $a$  equals  $b$ , -1 otherwise.

Let  $a=10, b=5 \Rightarrow a > b \Rightarrow g(-5)$ ; then return -1;

$a=5, b=10 \Rightarrow a < b \Rightarrow g(-5)$ ; then also return -1;

$a=b \Rightarrow$  return 0;

**A sorting algorithm iteratively traverses through a list to exchange the first element with any element less than it. It then repeats with a new first element. What is this sorting algorithm called?**

**Option 1 : insertion sort**

**Option 2 : selection sort**

**Option 3 : heap sort**

**Option 4 : quick sort**

It is Insertion Sort:

selection sort searches for the minimum element in the list then replaces with the first element:

Insertion sort is the one which selects first element and replaces with the next element less than it!!

**if  $\log_2 \text{base } 10 = 0.3010$ , find the value of  $\log_5 \text{base } 10$**

$\log_5 \text{ base } 10 = \log(100/4) \text{ base } 10 = \log 100 \text{ base } 10 - \log 4 \text{ base } 10 = 2 - 2(0.3010)$

$= 2 - 0.6020$

ans = 1.398

**Q5. Any program residing in the memory contains a set of instructions that need to be executed by the computer in a sequential manner. This cycle for every instruction is known as the instruction cycle. The cycle consists of the following steps which may or may not be the proper sequence of the execution.**

**1. Fetch the operand from the memory**

2. Execution
3. Fetch instruction
4. Decode the instruction
5. Result

In which of the following steps, is the Program Counter(PC) loaded with the address of the next instruction?

- ☐ 5.2
- ☐ 6.2
- ☐ 7
- ☐ 8

- ☐ Execution
- ☐ Fetch instruction
- ☐ Decode the instruction
- ☐ Result

it is case of subroutine in program when we call the SB for execute the instr.then PC is set on the stack for fetching the next instruction

$$4^x + 3 = 2^x + 7$$

a)3 b)2 c)1 d)none of the above

$$4^{x+3} = 2^{x+7}$$

$$\Rightarrow 2^{2(x+6)} = 2^{x+7}$$

$$\text{so, } 2x+6 = x+7$$

$$\Rightarrow x = 1$$

$$\text{so, } x = 1$$

A hash table can store a maximum of 10 records. Currently there are records in locations 1, 3, 4, 7, 8, 9, 10. The probability of a new record going into location 2, with a hash function resolving collisions by linear probing is

- Option 1 : 0.6
- Option 2 : 0.1
- Option 3 : 0.2
- Option 4 : 0.5

ans:0.6

#### 2015 & 2016 Batch Freshers Registration Link

If the new record hashes onto one of the six locations 7, 8, 9, 10, 1 or 2, the location 2 will receive the new record. The probability is 6/10 (as 10 is the total possible number of locations).

Rajini is given an efficient code for summing two  $n \times n$  matrices and putting the result in a third matrix. She is asked to find it's time complexity. She realizes that the number of iterations required is more than  $n$ . What can she claim with regard to the complexity of the code?

- Option 1 : It is  $O(n)$
  - Option 2 : It is  $O(n^2)$
  - Option 3 : It is  $?(n)$
  - Option 4 : It is  $?(n)$
- option 2: it is  $O(n^2)$

In a town the population grows at a simple rate of 10% in a decade and compounds from decade to decade. Find the population at the beginning of the 1970s if the population at the beginning of the 1990s is 3,63,000 people.

here the rate is compounded decade to decade.formula to calculate the population  $n$  years ago is

$p/(1+r/100)^n$  where  $p$ =current population, $r$ =rate of increase of population.here  $n=2$  as from 1970 to 1990 is 20 years .by putting the values in the formula we get the answer as 300000.

Stack is useful for implementing

- Option 1 : radix search
- Option 2 : breadth first search
- Option 3 : recursion
- Option 4 : none of these

option3:  
recursion

**6,3,18,36... next digit of no;**

$$6+3 = 9+9 = 18$$

$$6+3+18 = 27+9 = 36$$

$$6+3+18+36 = 63+9 = 72$$

**find the odd no:2,3,12,36,86,167**

given series. 2,3,12,36,86,167

now,

$$3-2=1 \Rightarrow 1^2=1$$

$$12-3=9 \Rightarrow 3^2=9$$

$$36-12=24 \Rightarrow \text{here if we change 36 into 37 then } 36-12=25 \Rightarrow 5^2=25$$

$$86-36=50 \Rightarrow \text{Similary } 86-37=49 \Rightarrow 7^2=49$$

$$167-86=81 \Rightarrow 9^2=81$$

so answer will be 36.

**Q)what is the greatest positive power of 5 that divides 30! exactly.**

- Option
- a)5
  - b)6
  - c)7
  - d)8

$$\text{power of } 5 = 30/5 = 6$$

$$\text{power of } 5 = 6/5 = 1$$

$$\text{total power of } 5 = 6+1 = 7$$

Five student have not been absent for the entire first sem .They asked to draw one pass each from a bag that has 5 movies passes and 5 meal passes.parul and maru are the first two students to draw a pass simultaneously.what is the probability that both drawn movie passes?

option:5/6,1/2,2/9,4/5

$$((5c2 * 5c0)/(10c2)) = 2/9$$

When the price of a product was increased by 15% the number of items sold where decreased by 20% . what is the net effect?

$X+Y+XY/100$  Apply these formula

Than  $15-20-15*20/100=8\%$

8% ka loss

Integer n,i,j

input n

for i=0 to n increment 1

{

print end of line

for j=0 to i increment

{

if(i-j equals 1)

print "1"

else

print"10"

}

}

option: 1

101

10101

b) 1

101

10101

1010101

c) 1

010

10101

d) 1

010

10101

0101010

e)10

110

10110

1010110

101010110

the condition is

for i=0 to n increment 1

so in first loop ll take i=0

now, for j=0 to i increment

now j=0

now i-j=1

then print 1 else 10

so here i-j=0-0=0,therefore ll print 10

then in second loop i=1 nd j=0,1 coz we hav to take from 0 to i

so here for j=0, i-j=1-0=1 and for j=1.i-j=1-1=0

therefore ll print 110

and so on and the answer is option (e)

**in non leap year what is the probability that last day of the year starts with t?**

Total monday in a non leap year day=52

similarly tue,wed,thu,fri,sat,sun=52 individually

probability of last day of year starts with t/ Total no. of days=

$52+52(\text{tue}+\text{thu})/52+52+52+52+52+52+52(\text{mon,tue,wed,thu,fri,sat,sun})$

=

104/364

in simplify form= $2/7$  ans..

**Zenab and Shashi independently write a program to find the the mass of one mole of water, which includes mass of hydrogen and oxygen. Zenab defines the variables:**

**integer hydrogen, oxygen, water // Code A**

**while Shashi defines the three quantities as:**

**integer a, b, c // Code B**

**Which is a better programming practice and why?**

**Option 1 : Code B is better because variable names are shorter**

**Option 2 : Code A is better because the variable names are understandable and non-confusing**

**Option 3 : Code A will run correctly, while Code B will give an error.**

**Option 4 : Code B will run correctly, while Code A will give an error.**

**Option 2 : Code A is better because the variable names are understandable and non-confusing**

**Afzal writes a piece of code, where a set of three lines occur around 10 times in different parts of the program. What programming concept can he use to shorten his program code length?**

**Option 1 : Use for loops**

**Option 2 : Use functions**

**Option 3 : Use arrays**

**Option 4 : Use classes**

**option 2 : Use functions**

**A for-loop is used for which of the following purposes?**

**Option 1 : Decision-Making**

**Option 2 : Iteration**

**Option 3 : Recursion**

**Option 4 : None of these**

**option2: Iteration**

**Consider the statement**

**while (a < 10.0) { a = a\*a }**

Assuming a is positive, for what value of a will this code statement result in an infinite loop?

Option 1 : a < 1.0 Option 2 : a < sqrt(10) Option 3 : a > sqrt(10) Option 4 : a = 0

Option 4 : for a= 0

As:-

While loop check: ( 0 infinite will also remain true as condition remains satisfied always !

Causing loop to enter an infinite state.

what is next number in the below series?

8,8,15,23,38,?

its 7,8,15,23,38..

7+8=15

8+15=23

15+23=38

23+38=61

Let A be containing 10 distinct elements ,then the total number of distinct functions from A to A IS

Ques. Statements

P: Some children are adults.

Q: Some adults are not old

Conclusions

I. Some children are not old.

II. Some children are old.

Op 1: Only conclusion I follows

Op 2: Only conclusion II follows.

Op 3: Neither I nor II follows.

Op 4: Both I and II follows.

Op 5:

Correct Op : 3

ans. either I or II

A car engine is half filled and holds 15lt of petrol.what fraction of the engine is full if it contains 18 lt of petrol?

1/2 of x = 15

x= 30 ltrs

18/30= 3/5

Surbhi wants to implement a particular data structure using a static array. She uses the concept of circular list to implement the data structure, because this allows her to efficiently use all fields of the array. Which data structure is Surbhi implementing?

Option 1 : a stack

Option 2 : a queue

Option 3 : Binary Tree

Option 4 : None of these

What is the value of  $\log_3 1.5 + \log_3 6$  ?

$\log_3 1.5 + \log_3 6$

$= \log_3 (1.5 * 6)$

$= \log_3 9$

$= \log_3 3^2$

$= 2 * \log_3 3$

$= 2$  ans
